Surface Onboarding automation

Salesforce integration user: access list. Attachment to the request "Salesforce integration user for the Surface Onboarding automation", 12 November 2026. Prepared by Milton Stevenson, Customer Solutions.

1. The user

Username	`surface-oi@pentera.io` (or with a suffix if the name is already taken)
Email	Team mailbox (to be confirmed)
User license	Salesforce Integration
Profile	Minimum Access - API Only Integrations
Permission set license	Salesforce API Integration
Permission set	Surface Onboarding Automation (section 2)

2. Permission set "Surface Onboarding Automation"

Object access

Object	Read	Create	Edit	Delete	View All Records
Customer_Onboarding__c	Yes	No	Yes (3 fields only)	No	Yes
Account	Yes	No	No	No	Yes
Contact	Yes	No	No	No	Your choice (or through the parent account)
DealHub_Subscription__c	Yes	No	No	No	Yes
User	Yes (Name)	No	No	No	No

Field access

Object	Read only	Read and edit
Customer_Onboarding__c	Id, Name, CreatedDate, LastModifiedDate, Account__c, Account_Name__c, Account_Country__c, Onboarding_Approval_Status__c, Onboarding_Product__c, Onboarding_Type__c, Submission_Date__c, Onboarding_Comments__c, Primary_User__c, Primary_User_Name__c, Primary_User_Email__c, Main_Domain__c, Alternate_Domains__c, Email_Domains__c, Surface_Tenant_Region__c, Completed_Time_Stamp__c	**Onboarding_Stage__c** **Account_UUID__c** **Surface_Account_ID__c** (plus Onboarding_Automation_Operator__c, if created)
Account	Name, Delivery_Engineer__c	none
User	Name (the Delivery Engineer)	none
Contact	FirstName, LastName, Email (the CO's Primary User only)	none

DealHub_Subscription__c	Id, SystemModstamp, DealHub_Account__c, Product_Full_Name__c, DealHub_Status__c, DealHub_Subscription_Start_Date__c, DealHub_Subscription_End_Date__c	none
Organization	Id (to check it is the right org)	none

Other access

- **List view:** "Open Onboardings" on Customer_Onboarding__c, shared with this user or with a public group it is in (the automation finds the list view and reads its results).
- **Stage values it writes** (must be available on the record type it uses): Account Scanning, Scan Completed Successfully, User Created, Onboarding Completed. The CO reaches "Request Approved" through the business approval, never through this user.

Not needed: please do not grant

- Create or Delete on any object.
- Edit on Onboarding_Approval_Status__c, Onboarding_Comments__c or any field not listed above.
- View All Data, Modify All Data, View Setup, Customize Application.
- Files / Content, Chatter, Apex, Tooling API, Bulk API, reports.

3. Sign-in

App	External Client App (or Connected App) "Surface Onboarding Automation"
OAuth flow	JWT bearer (certificate, no password)
Scopes	`api` (plus `refresh_token` and `offline_access` only if the Salesforce CLI needs them)
Authorization	Admin-approved users are pre-authorized, through the permission set above only
IP restriction	Our onboarding host's egress addresses (to be confirmed with IT)
Session timeout	Per your policy
Certificate	We send the public certificate only. The private key is generated on our onboarding host, never leaves it, and is rotated yearly.
Please send back	The client ID (consumer key) and the final username. Neither is secret.

4. How the automation uses this access

1. About once a minute: one read of recently changed COs, to show the onboarding queue.
2. When an operator (signed in with their own account) starts an onboarding: read that one approved CO, its account, its Primary User contact and its DealHub subscriptions.
3. After the tenant is created in BackOffice (by that operator's own account): write the tenant IDs and the stage on that CO, then read them back to confirm.

Nothing else is read or written. Every write is read back. Logs hold only counts, reason codes and the operator's identity, never record contents or keys.

5. Rollout

1. Read-only test first: sign in as the integration user and read one CO.
2. One write on a single CO, with the Salesforce team informed.
3. Switch the automation over and stop using the personal login.
